SKILLS & CERTIFICATIONS

- **Programming Languages:** JavaScript , TypeScript, C#, HTML, Tailwind CSS
- **Tools and Technologies:** Git, AWS, EC2 , S3, ElasticBeanstalk, Optimizely CMS (Episerver), Docker, Jest, Storybook
- **Frameworks and Database:** React, Vue.js, Sass, Express.js, Node.js, MongoDB, MySQL, .NET
- **Certification** - AWS Solution Architect Associate - Expected July 2025

RELEVANT EXPERIENCE

University of Technology Sydney, IT unit | Sydney

September 2024 - Present

Junior Software Engineer

- **Improved student engagement by 25%** through delivery of high-performance, accessible front-end reusable components and pages for UTS's new website, built from scratch and aligned with Figma designs and business needs.
- **Reduced UI development and onboarding time by 20%** by creating and documenting 20+ reusable components in a **Storybook-based component library**, enhancing collaboration and speeding up future builds.
- **Cut manual content editing effort by 30%** by developing reusable .NET blocks in **Optimizely CMS**, mirroring React components to support the seamless **migration of existing 2,000+ pages** from Drupal CMS.
- **Streamlined delivery of production-ready features** across 9+ Agile sprints by contributing 65+ GitHub pull requests and resolving critical issues, ensuring rapid iteration in a high-performing dev team.
- **Enhanced UI quality and accessibility** by collaborating with UX, QA, and Product teams to fix design-to-production mismatches and implement WCAG-compliant features.
- **Enabled secure and scalable deployments** on AWS by managing infrastructure setup on EC2 for application hosting and S3 for asset storage, following GitOps practices.
- **Tech Stack:** React (Hooks, Context API), TypeScript, Tailwind CSS, .NET (C#), Optimizely CMS, Storybook, AWS (EC2, S3), GitHub, Jest, Agile (Scrum), Figma, Drupal

TECHNICAL PROJECTS

Car Rental Application | Personal Project | [Link](#)

Summer 2024

- Built a full-stack car rental website with real-time search, filtering, and reservation functionality using the **MERN stack**. Implemented features including live keyword search with suggestions, reservation with auto-filled form memory, and confirmation workflows
- Used **MongoDB** for persistent storage of car and order data, **localStorage** for client-side state retention, and **Axios with AJAX** for dynamic interactions. **Dockerized** the app and deployed it on **AWS Elastic Beanstalk** for public access.
- Technologies used - **MongoDB, React, Express.js , Node.js, AWS Elastic Beanstalk, Docker**

Discord Chat Bot | Personal Project | [Link](#)

Spring 2025

- Utilized **PDFPlumber** to extract structured data from bank statements and financial documents, integrating this capability into a Discord chat bot built with **FastAPI** incorporating **asynchronous** methods.
- Enabled users to query extracted document data in real time by leveraging the **OpenAI API**, providing intelligent, context-aware responses based on advanced language models.
- Technologies used - **Python, Fast API, PDF Plumber**

EDUCATION

University of Technology Sydney | Sydney, NSW

Bachelor of Science in Information Technology | GPA: 6/7

July 2022 - July 2025

Awards & Honors: Dean's List (2023) | UTS Academic Excellence International Scholarship
